

The protection corridor

Coverage is only meaningful when households can afford to use it. Countries move toward the upper-left.

HOW TO READ IT
Every dot is one country. Move left for lower household cost burden; move up for stronger service coverage.

INTERPRETATION

A rising UHC line is positive. A falling OOP line is positive. The protection score combines both signals but is not a clinical outcome.

COUNTRY BENCHMARK · 2023

Country	Region	IncomeGroup	Latest UHC	Latest OOP	Latest Protection Score
Afghanistan	Middle East & North Africa	Low income	42.0	77.1	-35.1
Albania	Europe & Central Asia	Upper middle income	71.0	48.3	22.7
Algeria	Middle East & North Africa	Upper middle income	70.0	45.0	25.0
Total			68.2	30.6	37.6

Methodology & Sources

A transparent analytical layer for healthcare access and household financial exposure.

WHAT THIS REPORT MEASURES

UHC SERVICE COVERAGE INDEX

World Bank indicator SH_UHC_SCI. Index of essential health-service coverage; higher is better.

OUT-OF-POCKET SHARE

World Bank indicator SH.XPD.OOPC.CH.ZS. Household out-of-pocket health spending as a share of current health expenditure; lower is better.

PROTECTION SCORE

UHC index minus OOP share. A transparent comparative signal created for this dashboard—not an official WHO or World Bank indicator.

DATA FOUNDATION

SOURCE

World Bank Open Data; underlying health indicators are attributed to WHO.

ANALYTICAL WINDOW

2000–2023 common period. 4,529 complete country-year observations across 192 countries; the 2023 snapshot contains 191 countries.

GRAIN

Country × year. Missing indicator-years are excluded. Country averages are not population weighted.

REPRODUCIBILITY

The PBIP includes the prepared CSV, Power Query import, semantic model, DAX measures, report definition, and source documentation.

INTERPRETATION GUARDRAILS

- Association is not causation.
- The UHC index and OOP share measure different concepts and should not be interpreted as interchangeable.
- National values conceal subnational and within-country inequality.
- Reporting practices, revisions, and indicator availability vary by country and year.
- The protection score is a portfolio analytical construct intended for comparison, not a policy target or clinical judgment.
