UHC COVERAGE & OOP FINANCING SHARE

Coverage and financing mix

Service coverage and OOP share describe different systems. The upper-left combines higher UHC with lower OOP financing share; household hardship requires a separate indicator.

HOW TO READ IT

Every dot is one country. Move left for lower OOP share of health spending; move up for higher UHC service coverage.

UHC MINUS OOP SHARE (EXPLORATORY)

37.6

INTERPRETATION

A rising UHC line is positive. A falling OOP share means a smaller share of total health expenditure is paid out of pocket; it does not prove lower household hardship. The UHC-minus-OOP comparison combines both signals but is not a clinical outcome.

COUNTRY BENCHMARK · 2023

Country	Region	IncomeGroup	Latest UHC	Latest OOP	Latest Protection Score
Afghanistan	Middle East & North Africa	Low income	42.0	77.1	-35.1
Albania	Europe & Central Asia	Upper middle income	71.0	48.3	22.7
Algeria	Middle East & North Africa	Upper middle income	70.0	45.0	25.0
Total			**68.2**	**30.6**	**37.6**

Methodology & Sources

A transparent analytical layer for healthcare access and out-of-pocket financing share.

WHAT THIS REPORT MEASURES

UHC SERVICE COVERAGE INDEX
World Bank indicator SH_UHC_SCI. Higher is stronger service coverage.

OUT-OF-POCKET SHARE
World Bank indicator SH.XPD.OOPC.CH.ZS. This is a share of current health expenditure, not a household hardship rate.

UHC MINUS OOP SHARE
UHC index minus OOP share; an exploratory arithmetic difference, not an official indicator or a hardship measure.

INDICATOR QUADRANTS
Higher UHC / lower OOP: UHC ≥60 and OOP <40. Higher UHC / higher OOP: UHC ≥60 and OOP ≥40. Lower UHC / lower OOP: UHC <60 and OOP <40. Lower UHC / higher OOP: UHC <60 and OOP ≥40. These describe indicator combinations, not household hardship.

DATA FOUNDATION

SOURCE
World Bank Open Data; underlying health indicators are attributed to WHO.

ANALYTICAL WINDOW
2000–2023 common period. 4,529 complete country-year observations across 192 countries; the 2023 snapshot contains 191 countries.

GRAIN
Country × year. Missing indicator-years are excluded. Country averages are not population weighted.

REPRODUCIBILITY
The PBIP includes the prepared CSV, Power Query import, semantic model, DAX measures, report definition, and source documentation.

INTERPRETATION GUARDRAILS

- Association is not causation.
- The UHC index and OOP share measure different concepts and should not be interpreted as interchangeable.
- National values conceal subnational and within-country inequality.
- Reporting practices, revisions, and indicator availability vary by country and year.
- The UHC-minus-OOP difference combines unlike indicators and is not a financial protection or household hardship measure.
